Mix-use
Multi-Generational Housing
in China
and retrofit subsidized housing area with neighborhood facilities and open space

Concept:

- Key word: aging society; multi-generational living tradition

A common scenario:

1. One-child policy—result to many empty families, many families can barely go out.
2. Too much time is spent on work, children and grandchildren.
3. Each family, only one child for a new family, her sister is a nurse. They stay close!
4. The problem is how to develop a new large housing complex in the existing subsidized residential area.

Problems for the families:

1. Huang's wife is a nurse, she is a modern family. However, her father is a more traditional family. His wife is a nurse, and he is not used to living in a modern way. The results is not accessible, or they need to go down the public facilities.
2. Huang's wife is a nurse, she is happy for open space, she can see her children and grandchildren. She is happy that she can see her family, and enjoy their company.

A Humanistic Response:

The multi-generational housing has been recently developed in Huang's neighborhood.

Solution:

- Key word: open space

A multi-generational housing has been recently developed in Huang's neighborhood. It is a place to live for the elderly, it is a place to live for their family and friends. It is a place to live for everyone. It is a place to live for the elderly, it is a place to live for their family and friends. It is a place to live for everyone. It is a place to live for the elderly, it is a place to live for their family and friends. It is a place to live for everyone.

Facade:

The facade is a place to live for the elderly, it is a place to live for their family and friends. It is a place to live for everyone. It is a place to live for the elderly, it is a place to live for their family and friends. It is a place to live for everyone. It is a place to live for the elderly, it is a place to live for their family and friends. It is a place to live for everyone.

Plans:

Two sets of module

1. minus
2. open
3. colorful
4. move out
5. vary

Multi-Generational Housing
in China
and retrofit subsidized housing area with neighborhood facilities and open space

The project

is

What is the project?

The problem I will address in the project is how to develop a new large housing complex in the existing subsidized residential area. The new type of housing will be designed for the elderly society, also improve the living environment for the elderly area with public amenities and open space.

Although I will create a particular design for Huoxing, the concept generated by the social and economic data for the new type of housing development in the subsidized housing.
